

IN A NUTSHELL: ACADEMICS

- Academics takes up the **largest chunk of training time** at AFPI. It is very important because it is essential for all cadets to clear the CBSE Board exams as also the UPSC entrance exam for NDA.
- All cdts study **non medical subjects** – Physics, Chemistry and Maths because these subjects will go a long way in helping you to clear the NDA entrance exam.
- Many cdts have opted for IP instead of Physical education. That is good. All cdts having IP will be put in the same Sqn. Avoid requesting for changes in future because if you change your subject your Sqn may also have to be changed. We have not yet finalized your Sqns, so if any cdt does want to change he should do so early.
- The first pre requisite to doing well in Academics is **Class Discipline**. Cdts must be well disciplined in class.
- If you have any **doubts in class** or anything a teacher says is not clear to you, please ask for a clarification.
- **Take notes**. When you write down something you are automatically assisting your memory and will be able to recall the subject better.
- **Do not sleep in class**. Sleeping in class is a serious offence.
- **Revision** of what has been taught to you in class is very important.
- **Prepare** for the next day's class. You know what is to be taught to you on the next day. Go through the relevant chapter in advance. It will enable you to comprehend what is being taught in a far better manner.
- Do not postpone studies. You must **study regularly**. If you say I will study when the exams are near you will find it very difficult to get good marks.
- **Use memory techniques** to help you. A lecture on the subject will also be organized for you later.
- Work to achieve academic excellence. Cdts getting more than 85% marks will be presented the **Academic Torch** which they can wear in uniform.
- You also stand a much better chance of **becoming an appointment** in your second term here if you are good in Academics.
- Please make sure that you attend all online classes regularly. Do not be late for class.
- We can understand that once in a while you may have internet / network problems. But if it happens too often we get worried.
